

## Advantages of book2net

### RESOLVING POWER

The **book2net** book scanner features a true 400 ppi resolving power related to ISO standards.

### AUTO IMAGE ENHANCEMENT

The **book2net** scanner is delivered with a full scale image enhancement package as a standard feature. This eliminates the need of a separate post scanning image process. The image enhancement process operates as a separate thread in the background and thus is included in the real scanning time (=> productivity). Workflow-based cutting, deskewing, splitting, printing, processing and saving in several file formats including: JPG, JPG 2000; TIFF and PDF single and/or multipage

### LIGHT SOURCE

With our special cold light illumination concept, unnecessary heat-, noise- and light emission becomes history. The focused power LED exposure light beam is particularly easy on the eyes and jitter-free. The two movable illumination strips have an outstanding low power demand of only 13,2 watts each and can be replaced by the operator within 2 minutes per unit. This concept allows also an independency from ambience light.

### PRODUCTIVITY

The bi-directional scanning concept renders any repositioning time unnecessary. The scanning process starts with the document and not with the border of the layout section; regions of interest can be defined and speed up the scanning process.

### WARRANTY

Each scanner will come along with a full 3 year part warranty, on demand older units can be remanufactured for an additional 2 year warranty.

### INSTALLATION AND OPERATION

All scanners are shipped pre-adjusted and can be easily installed by the operator or user. With every scanner, a full-scale documentation on setting-up the unit and handling of all operations are included. The out-of-box to first-scan-time is less than 10 minutes.

### LAYOUT SECTION

The layout section enables scanning of books and originals up to 650 mm x 450 mm (> A2!). Therefore the **book2net** scanner covers a big range of applications. The full flex book cradle pressure pads will smoothly lift the document up to the best focus level.
